Designing Tomorrow, Today.

COMPETITIONS

Ashoka University's Biggest Tech Conference

21ST MARCH
22ND MARCH, 2026

1 L + PRIZE POOL

HACKHERTHON

Tech Hackathon 2026

The WicsCon Women in Tech Hackathon 2026 is a women-inclusive innovation challenge conducted as part of WiCSCon. Participants will work on a real-world Working Problem Statement (WPS) provided by a partnering organization (to be disclosed prior to the commencement of the hackathon). The challenge is designed to encourage innovative, practical, and scalable solutions to industry-relevant problems.

Eligibility:

- Each team must have at least one woman member.
- Open to undergraduate, master's, and PhD students.
- Participation allowed as:
 - Individual (1 member)
 - Team of 2 members

HACKATHON STRUCTURE

Round 1: Online Submission Round

- Problem Statement Release: 14th March
- Participants will have three days to develop and submit their solution. Submission details and format guidelines will be shared upon registration.

Top 10 teams/participants will be shortlisted for the final round.

Round 2: Final Presentation Round (Offline)

Date: 22nd March

Shortlisted finalists will present their solutions before a judging panel. Final results will be declared after evaluation

Evaluation Criteria

- Relevance to the problem statement
- Innovation and originality
- Technical depth and implementation
- Feasibility and scalability

REGISTER NOW

DESIGN SPRINT

A Relay-Style Visual Thinking Challenge

The WiCSCon Design Sprint is a fast-paced, collaborative design challenge that explores how ideas evolve when communication is limited to visual expression alone. Structured as a relay-style sprint, the event brings together teams of three participants who vibecode a single website, without speaking or coordinating with each other once the sprint begins. Each participant contributes sequentially, with each responsible for different roles:

1. UI/UX Design
2. Vibe Coding
3. Pitch Deck

Each team will be assigned a problem statement on the day of the conference. The format foregrounds clarity of thought, design communication, and continuity of ideas, rather than verbal explanation or planning. The final outputs are presentation-based solutions of the website. Each team will present their website via the pitch deck prepared.

Stages of the Design Relay

Each stage plays a distinct role in shaping the final poster:

Strategy Window - 30 Minutes

All three team members may communicate.

They must:

- Understand the problem statement
- Define the core solution
- Decide user flow and key features
- Finalize typography, color palette, and visual direction
- Assign clear responsibilities

Once this window closes, communication stops!

Phase I: Parallel Build - 30 Minutes

Two members work simultaneously:

UI/UX Designer: Designs layout and user flow. Finalizes interface structure and Establishes visual hierarchy

Vibecoder/Developer: Builds the website framework, Implements core functionality and Aligns structure with design plan

They must execute based on the agreed strategy. No input from the Presentation Lead during this phase.

They may choose to work on their own part independently.

Interaction Break – 6 Minutes

All three team members may briefly reconvene. They may review progress, identify gaps, decide improvements and align on final direction
After this 6-minute checkpoint, communication ends again.

Phase II: Implementation Lock - 35 Minutes

Only the UI/UX Designer and Vibecoder continue working.

They must:

Implement agreed changes

- Refine design consistency
- Fix usability gaps
- Complete unfinished features

At the end of this stage, the website is locked. The Presentation Lead does not assist during this phase. They may wish to work on their part independently.

REGISTER NOW!

Last Stage: Pitch Consolidation–20 Minutes

Only the Presentation Lead works. No communication with teammates is allowed. The submission will contain the final pitch deck consisting of the solution and other details.

Rules & Guidelines

To preserve the integrity of the relay format, a few essential rules apply:

- Team members must not communicate with each other during stage transitions or while the sprint is ongoing, only the poster carries the idea forward.
- All work must be completed within the allocated time slots.
- The content created must be original and produced during the sprint.
- Any violation of the no-communication rule may result in disqualification.

Eligibility

Open to undergraduate, master's, and PhD students.

Participation allowed as:

- Team of 3 members
- Individual (1 member) or Team of 2 members (Will be allotted into teams of three)

Inter-college teams are allowed. Within each team, members rotate through three defined roles, contributing at different stages of the sprint.

THE AI BLUEPRINT

AI & Education Policy Consulting Challenge 2026

The AI & Education Policy Consulting Challenge 2026 is a live, case-based competition focused on the intersection of artificial intelligence and education policy.

Participants will be required to analyze a real-time policy case and develop strategic, structured recommendations within a limited timeframe. Artificial Intelligence is now deeply embedded in education. Students use AI tools for research, drafting, coding, and problem-solving. Rather than resisting this shift, institutions must rethink how learning is evaluated and how fairness is preserved. Further details will be disclosed to participants closer to the competition.

Context

AI systems developed by organizations such as OpenAI and Google are increasingly capable of generating essays, solving coding problems, summarizing research, and completing assignments.

This creates a structural challenge:

Traditional take-home assignments are easily AI-assisted. Quality of output no longer guarantees depth of understanding. Grading systems were not designed for AI-collaborative work.

Academic integrity policies often rely on detection rather than design reform.

The challenge is to move from AI policing to AI-integrated academic design.

Competition Format

REGISTER NOW!

Reporting & Case Release

- Participants must report at 10:00 AM on 22nd March, 2026.
- A detailed case brief outlining the education policy scenario will be shared on the spot.

Round 1: Case Analysis (1 Hour)

- 1 hour will be given to analyze the case and develop a structured solution.
- Internet will be provided.
- Submissions will be evaluated by the judging panel.

Break & Shortlisting

- A 30-45 minute break will be provided while judges evaluate submissions.
- Shortlisted teams will proceed to the final presentation round.

Final Round: Strategy Presentation

- 1 hour will be given to prepare a presentation of their proposed solution.
- No internet access will be provided here.
- Each team will present before the judging panel, followed by a Q&A session.

Eligibility:

- Open to undergraduate, master's, and PhD students.
- Participation allowed as:
 - Individual (1 member)
 - Team of 2 members

Evaluation Criteria

- Depth of policy understanding
- Strategic clarity and structure
- Feasibility of recommendations
- Innovation in AI integration
- Quality of presentation and defense

Winner Benefit:

- Meet-and-greet opportunity with a representative from a leading consulting firm + cash prize
- Additional cash prizes for Runner-up positions
